

# OMM Product Manual

## OMM Ultra Waist pouch 4L

**OMM**

ORIGINAL MOUNTAIN MARATHON

## OMM Features

A larger Waist Pouch with innovative “quick stash” single handed bottle holster, supplied complete with Ultra Bottle.  
Why only one holster? Avoiding bounce is the key factor.

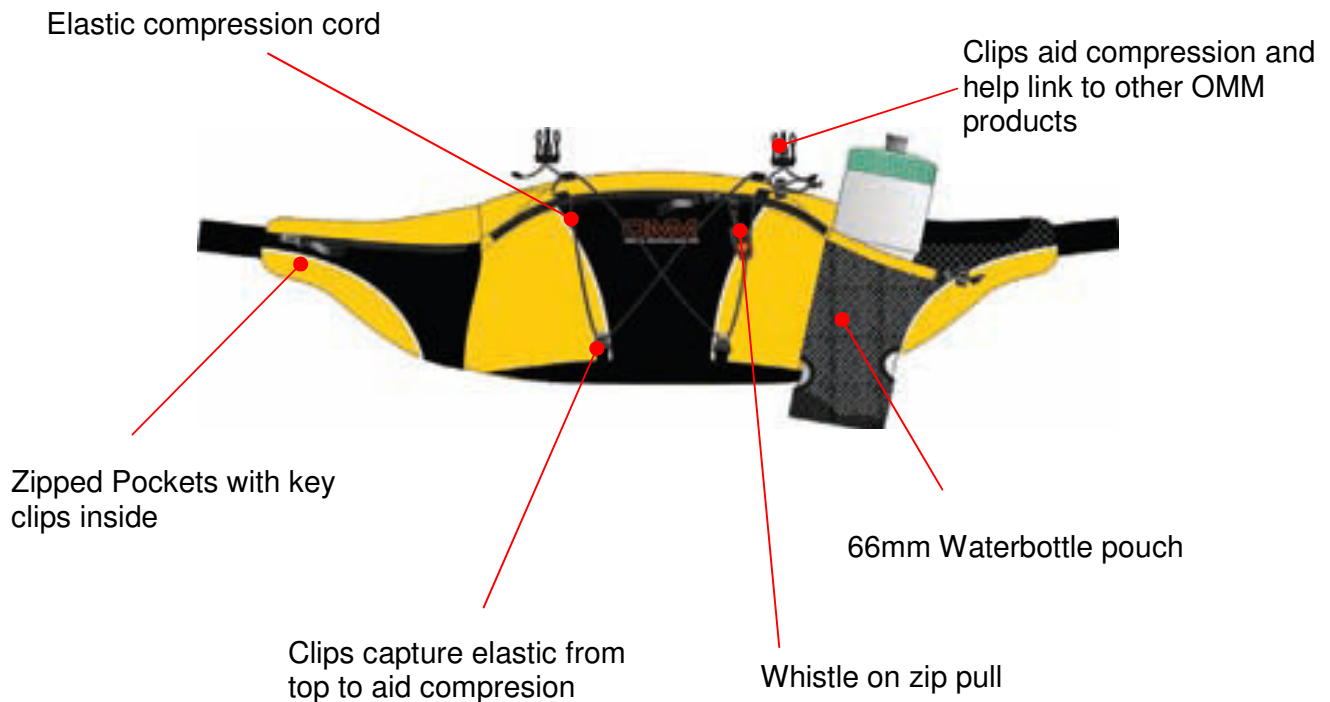

There is an extra horizontal sleeve inside to hold a second bottle close to the body. Compression elastics to stabilise load or stash additional gear. Whistle integrated with zip puller.

The Ultra Bottle is 66mm diameter - not the 76mm standard for cycle bottles. It is therefore easier to hold in the hand for long periods, and bounces less.

The Ultra Bottle has a wide opening and fill marks to make it easy to add drinks powders. Also available as an accessory.

### Linking System

Ultra Waist Pouch has linking buckles to fit to The Last Drop to give a 14 litre pack, complete with belt pockets. Alternatively the belt can be folded away in the integral pocket, and the Ultra Waist Pouch can be attached to the linking buckles under the lid of our larger packs.”

## OMM So, whats new?

### SO, WHATS NEW?

The OMM Waist Pack 3 has been a great success, but we couldn't leave it there – so listening to your feedback we have increased performance by creating the OMM Ultra waist Pack 4L

Now with a larger zipped waist belt pocket for added security – Key clips inside to make sure you don't lose valuables.

Fully OMM Leanweight Linking System compatible – this pouch can be used as a standalone system or integrates with other packs for added versatility.

It comes complete with an OMM water bottle. This is a purpose designed, wide opening bottle for easy use with energy powders, and marked for SIS powders. It is an ideal size to carry in your hand.

Internal pouch for second bottle, along with mobile phone/GPS pouch, and pen holder.

Whistle supplied as standard - attached to main pouch zip.

Elastic on lid – can carry extra clothing, or be used to aid compression by linking to clips on bottom seam.

Main waist belt can be concealed behind back pad, allowing it to be used in an OMM pack as security pocket.

## OMM Product overview

Our packs stand out from the crowd because of the following:-

1. **LEANWEIGHT™ DESIGN:**

Unique method of customisation by stripping OMM Adventure Packs to their **LEANWEIGHT™** or adding features .e.g. Mountain Mover pack is 1.8 kg full weight and 700g **LEANWEIGHT™**

2. **HYDRATION SYSTEM:**

Whether you are in UK uplands where water is freely available year round and doesn't (yet) need treatment --- or in a limestone area or hot desert where all water must be carried; our packs offer you total flexibility using traditional, readily available bladder systems and/or bottles – carried inside or outside the pack for rapid refill, right or left shoulder tube feed.

3. **GEAR&TOOL CARRY CAPABILITY:**

Unique flexible designs enable you to carry any tool required for the route, journey or competition: compass, camera, poles, axes, skis, snow shoes, snow shovel and so much more See tool carry diagrams by each product

4. **CUSTOMISATION:**

For the lightweight pundits we provide advice on more aggressive customisation and still hold guarantees if you 'resort to the knife'

5. **STABILITY:**

A special configuration of harness attachment points and compression systems keeps the load with you

6. **STRENGTH:**

Lightweight is achieved without strength loss by means of the OMM **LEANWEIGHT™** (textile) **CHASSIS**

7. **OTMA:**

**On The Move Accessibility.** Means speed and efficiency on the hill. All the things ideally placed where you want them - when you want them.

## OMM Leanweight Link System (Patent applied for)

This is a practical system driven by ideas coming from our lead user group. Efficiency on the hill comes from having your gear where you want it, when you want it. OMM Leanweight™ systems are about customising the pack capacity and capability.

Ultra Waist Pouch has linking buckles to fit to The Last Drop to give a 14 litre pack, complete with belt pockets. Alternatively the belt can be folded away in the integral pocket, and the Ultra Waist Pouch can be attached to the linking buckles under the lid of our larger packs.

Using the small cord buckle clips, the OMM Ultra waist Pouch 4 L will marry up to the clips under the lid flap of most OMM pack, this allows the Ultra waist pouch to be used as a secure pocket within.

Again using the small cord clips, the OMM Ultra Waist pouch will match up with the OMM last drop making a larger 14L pack complete with waist belt pockets!

The unique OMM 500ml drink bottle comes with the Ultra waist pouch, but due to its size can be used alone as a 'hand held' bottle, or intergrates with other OMM packs like the new Adventure Light 20L

## OMM Care and Maintenance

How to - get best product life and performance

All OMM packs are designed to be light and comfortable. Once a pack loses its DWR (Durable Water Repellent) finish, it will get heavier and less comfortable when it rains due to the ingress of water into the fibres of the pack, especially the mesh.

OMM recommend Grangers cleaning and re-proofing products. By treating the outer fabric with Granger's Fabsil or Fabsil Gold products you will not only keep your OMM pack as light as the day you bought it, but also help prevent fabric damage due to U.V. degradation.

Light soiling can be removed with a damp cloth. For more serious cleaning or re-proofing either hand or machine wash using Fabsil Universal Cleaner.

If machine washing, then follow the instructions below.

- If a pack is particularly soiled in a certain area, Granger's water based cleaner 'Plus' allows you to spot clean before you clean the entire pack. Simply apply a 50% treatment/water solution onto a clean cloth and gently work the solution into the soiled area. Make sure you wash the entire pack surface straight after applying the treatment
- Remove the Duomat, ice axe straps and loops.
- Make sure all zips and buckles are done up.
- Place inside an old pillowcase, to make sure that straps do not get tangled and caught.
- Wash at 30°C, synthetics cycle, short slow spin.
- Drip dry.
- Allow the pack to dry completely before applying Fabsil or Fabsil Gold

Small tears in the rucksack fabric should be repaired promptly to stop them spreading and prevent fraying. This can be done using a proprietary repair tape such as Tenacious Tape, available from most specialist outdoor shops. To further strengthen the repair, seal the edges of the patch with seam seal adhesive. Effective temporary repairs can be made in the field using duct tape.

## OMM Guarantee & contact details

We have a no hassle guarantee meaning that we stand by our products at all times as being fit for the intended purpose.

Returns and warranty claims. In the first instance, please contact the retailer from whom you purchased the product. Alternatively contact our UK Sales Agents:
