

OMM Product Manual

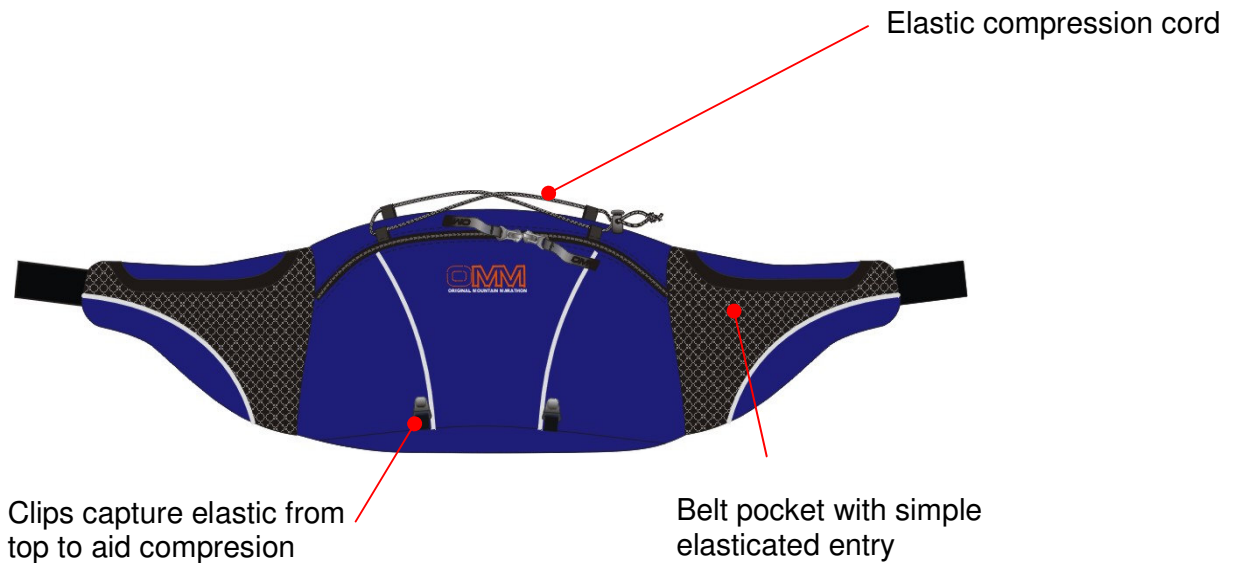

OMM Waist pouch 3L

OMM

ORIGINAL MOUNTAIN MARATHON

OMM Features

At last a lightweight waist pouch which is comfortable for long runs. Use alone, or team up with a shorter back length pack. With an elastic compressor, simple zip compartment and an elasticated pocket on each wing the pack is large enough to hold the essentials: top, pants, hat, gloves, whistle and carbo gels. Simple compression elastic to maintain stability, and allow clothing to be carried on top of the pouch.

OMM So, whats new?

SO, WHATS NEW?

The OMM Waist Pack 3 has been a great success, but we couldn't leave it there – so listening to your feedback we have increased performance by adding the following

- elastic shock cord compressor on top to hold jacket and/or compress contents.

210T	Lightweight, rip stop waterproof fabric	80g/m ²	Lightweight, but sound in performance because of integration with Leanweight chassis
HTTF	High Tensile Texturised Fabric	240g/m ²	This high tensile, high abrasion resistance fabric provides the integrity of the Leanweight chassis

OMM Care and Maintenance

How to - get best product life and performance

All OMM packs are designed to be light and comfortable. Once its DWR (Durable Water Repellent) finish, it will become heavier and less comfortable when it rains due to the ingress of water into the fibres of the pack, especially the mesh.

Once a pack loses its DWR finish, it will become heavier and less comfortable due to the ingress of water into the fibres of the pack, especially the mesh.

OMM recommend Grangers cleaning and re-proofing the outer fabric with Granger's Fabsil or Fabsil Gold to keep your OMM pack as light as the day you bought it. This will help prevent fabric damage due to U.V. degradation.

By treating your pack with Granger's Fabsil or Fabsil Gold products, you will not only keep it clean, but also help prevent U.V. degradation.

Light soiling can be removed with a damp cloth. For more serious cleaning or re-proofing either hand or machine wash using Fabsil Universal Cleaner.

If machine washing, then follow the instructions below.

- If a pack is particularly soiled in a certain area, Granger's water based cleaner 'Plus' allows you to spot clean before you clean the entire pack. Simply apply a 50% treatment/water solution onto a clean cloth and gently work the solution into the soiled area. Make sure you wash the entire pack surface straight after applying the treatment
- Remove the Duomat, ice axe straps and loops.
- Make sure all zips and buckles are done up.
- Place inside an old pillowcase, to make sure that straps do not get tangled and caught.
- Wash at 30°C, synthetics cycle, short slow spin.
- Drip dry.
- Allow the pack to dry completely before applying Fabsil or Fabsil Gold

Small tears in the rucksack fabric should be repaired promptly to stop them spreading and prevent fraying. This can be done using a proprietary repair tape such as Tenacious Tape, available from most specialist outdoor shops. To further strengthen the repair, seal the edges of the patch with seam seal adhesive. Effective temporary repairs can be made in the field using duct tape.

OMM Guarantee & contact details

We have a no hassle guarantee meaning that we stand by our products at all times as being fit for the intended purpose.

Returns and warranty claims. In the first instance, please contact the retailer from whom you purchased the product. Alternatively contact our UK Sales Agents:
